

SCOTT DATA center

Our Facial Authentication system has a self-service enrollment process. The enrollment station is located in the lobby of the data center next to the security desk and can be accessed at any time with a badge and PIN.

To enroll, the user presents their badge to the badge reader that is connected to the ROCK unit. Upon recognition, the unit prompts the user to look right, left, up, and down. The ROCK unit will then light green to show that enrollment is complete.

As we are trying to migrate from the fingerprint readers quickly, we request that you get into the data center and enroll at the earliest convenience.

See the following diagram for more directions.
